S.R. Smith SwimWall Systems™ can be customised to segment a swimming pool into multiple smaller areas in order to maximise pool space for a variety of aquatic activities.
CREATE MORE POOL TIME IN SECONDS

Key Features
• Resin and colour infused fibreglass construction for exceptional strength
• New construction and retrofit options
• Marine grade 316L stainless steel fittings
• Width, height and thickness are customised to requirements
• 15-Year Structural Warranty

HOW AN S.R.SMITH SWIMWALL WORKS
From the pool deck, air is pumped into the SwimWall which causes it to move into a vertical position within seconds. Lane lines can remain in place during the process. A large stainless steel pin secures the SwimWall to a locking mechanism on the pool wall. To lower the wall, the pin is retracted, the SwimWall is gently pushed to one side, and air is replaced with water. The SwimWall moves to the pool floor where it remains when not in use.

FAQs
Q: Does my swimming pool need to be drained to install a SwimWall?
A: S.R.Smith SwimWall Systems™ can be installed without draining the pool in about 3 days.

Q: What type of pool surface can accept a SwimWall?
A: SwimWalls can be installed in concrete, tiled, vinyl-lined, fiberglass-coated steel pools.

Q: Is a SwimWall typically used to separate a 50-metre pool at the half way point?
A: Yes, they are usually installed at the halfway point in a long course pool.

Q: How many lanes can be covered with one SwimWall?
A: Typically a SwimWall covers from 2 to 5 lanes.

Q: Is a SwimWall strong enough to withstand tumble turns?
A: Yes, SwimWalls stay rigid against the force of tumble turns with very little deflection.
