Aquatic access lifts are application specific. A completed Deck Profile Sheet helps to ensure the lift purchased for the application will work in accordance to ADA guidelines. S.R. Smith reviews all submitted Deck Profile Sheets as a service to our customers, free of charge. Before installing the pool lift, the installer must review and confirm the information provided on the Deck Profile Sheet. If the description of the application does not match the installation site, a new Deck Profile Sheet must be completed and submitted to S.R. Smith.

**NOTE:** FAILURE TO COMPLETE AN ACCURATE DECK PROFILE SHEET MAY RESULT IN THE LIFT NOT MEETING ADA COMPLIANCE GUIDELINES.

To complete the Deck Profile Sheet online, visit [www.srsmith.com/liftprofile](http://www.srsmith.com/liftprofile), contact Customer Service at (800) 824-4387 or email sales@srsmith.com.

INTRODUCTION

The purpose of this document is to provide information relating to the safe operation, care, and maintenance of the aXs2 EU/K.

Intended Lift User:

All of S.R. Smith’s lifts have been designed to assist anyone who has problems entering or exiting a swimming pool or spa - the only restriction is that the User does not exceed the weight limit of the product (300 lb/136 kg). It is the responsibility of the lift Owner to ensure that the correct safety procedures have been put in place and a risk assessment carried out. If a User is mentally challenged or has severe physical disabilities these issues must be taken into account to determine the number of persons required to complete the transfer onto the seat and the number of persons required to be in the water, ready to receive the User. The correct seat belt must be attached to the seat and fully fastened and used during each transfer.

Our goal is to provide our customers with the most advanced and innovative designs offering exceptional quality at affordable prices. All of our lifts meet the specifications set forth by the Access Board - ADAAG 2004 (US only), Medical Device Directive, 93/42/EEC, RoHS2 Directive 2011/65/EU, EN 50581:2012 and ISO10535:2006 including repeating the lifting cycle of the hoist (lift) over a total of 11,000 cycles. The lift system and AC powered battery charger complies with EN60601-1-2, 2007/03.

24 VDC
WARNINGS AND SAFETY SUMMARY

DANGER – FAILURE TO FOLLOW THESE WARNINGS, INSTRUCTIONS AND THE OWNER’S MANUAL MAY RESULT IN SERIOUS INJURY OR DEATH

**WARNING**

- ADULT USE ONLY – Use by children with adult supervision only. Only persons healthy enough for water activities should use the aXs. Users should consult with their physician to determine if water activities are appropriate for the User.
- Seat belt is to be used at all times during user transfer.
- NO JUMPING/DIVING/CLIMBING – Do not jump/dive from or climb on lift.
- Limit for use is ONE PERSON weighing less than the maximum weight limit of – 300lbs (136kg) for the aXs. Use only for transfer of user not as a hoist or crane.
- PINCH/Crush HAZARD – Always keep hands and fingers clear of lift arms during use.

**CAUTION**

- BATTERY CHARGE LEVEL – Check Battery Level before each use. Battery must show GREEN >50% charge level before use. When YELLOW <50% charge level is shown the battery must be fully charged before use. When RED <25% charge level is shown the lift must not be used and the battery must be fully charged before use.
- DAMAGE MAY RESULT – Do not use the seat or seat frame to move or position the aXs.
- DAMAGE MAY RESULT – Do not allow excessive moisture to collect in the battery case, it can affect battery and lift performance and could lead to battery failure and/or the lift failing to operate.

**WARNING**

**Pinch Points. Moving part can crush or cut. KEEP CLEAR.**

**WARNING**

LIMIT FOR USE IS ONE PERSON WEIGHING LESS THAN THE MAXIMUM WEIGHT LIMIT OF 300 lbs (136 kg)

ADA GUIDELINE SUMMARY* (USA Only)

1009.2.1 Pool Lift Location
Pool lift shall be located where the water level does not exceed 48”. If entire pool water level exceeds 48”, place pool lift where convenient.

1009.2.2 Seat Location
In the raised position, the centerline of the seat shall be located over the deck a minimum of 16” from the edge of the pool.

1009.2.3 Clear Deck Space
On the side of the seat opposite the water; a clear deck space shall be provided parallel with the seat. The space shall be 36” wide minimum and shall extend forward 48” minimum from a line located 12” behind the rear edge of the seat.

1009.2.4 Seat Height
The lift shall stop at 16” – 19” measured from the deck to the top of the seat surface when in the loading position.

1009.2.8 Submerged Depth
The lift shall submerge the seat a minimum of 18” below the stationary water level.

*Compliance with ADA is the responsibility of the pool owner. Visit www.ada.gov for complete guidelines.
**PRODUCT OVERVIEW**

The aXs2 Aquatic Lift is a fixed lift system designed so that individuals with disabilities and mobility impairments can have universal access to residential, commercial and community swimming pools or spas. The aXs2 is powered by a 24 Volt DC rechargeable battery. The lifting motion is provided by a screw driven electronic actuator and an electronic gear motor provides the turning motion. S.R.Smith has endeavored to design the safest possible lift system, however, lift users are responsible to follow all instructions in the owner’s manual, and all product labels to help ensure safe, reliable and proper performance of the lift to avoid injury. The aXs2 has a mast height of 46”/117 cm above the deck, provides 360° rotation and is intended to be used with simple pool gutter configurations having a deck to water distance of no more than eight inches. The maximum lift capacity for aXs2 is 300 lb/136 kg. Only persons healthy enough for water activities should use the aXs2. Users should consult with their physician to determine if water activities are appropriate for the User.

**aXs2 - PRODUCT COMPONENTS**
COMPONENT DESCRIPTION

The lift is made up of several components:

**Base Assembly** - Mounts to the pool deck and contains the turning elements of the lift.

**Base Insert Stem** - Slides into the square anchor sleeve that is installed on the pool deck.

**Mast** - The main vertical component of the lift.

**Actuator Arm** - Primary lifting arm of the lift connects the mast to the seat arm and is raised by the attached actuator.

**Support Arm** - Provides stability for the seat frame.

**Seat Arm** - Provides an attachment point for the seat assembly to the actuator and support arms.

**Motor Enclosure (left & right)** - ABS plastic cover shields base assembly components from weather. When cleaning the enclosure, be sure to use a clean, soft, non-abrasive material.

**Actuator** - Provides the up and down lifting action.

**Motor Assembly** – Consists of a 24-volt motor and gearing.

**Control Box** - The LiftOperator unit controls all lift operations with a touchpad buttons on the front panel that are identical to the user hand set. Three cables connect to the bottom of the Control Box to enable operation of the lift. The largest connector is for the hand control. Connector # 1 is for the motor cable (red stripe). Connector # 2 is for the actuator cable (green stripe).

**Touchpad Control** –

The touchpad control arrow keys can be used in the event that the hand control is out of reach or fails. Simply press and hold the arrow for the desired action for one movement at a time – Up, Down, Left, Right. Releasing the Arrow stops movement.

**Battery Level LED Indicators** –

The Battery Level LED Indicators show battery charge levels. The LED’s will illuminate when either the touchpad control or the hand control is activated and will stay lit for 10 seconds. At greater than 50% the LED glows Green, at less than 50% the LED glows Amber, and less than 25% the LED glows red and indicates the battery requires charging. If the battery level is less than 25%, do not operate the lift. Remove the battery and fully charge before use.

**Emergency Stop Button** –

In the event of an emergency, or if you need to stop lift movement immediately, pressing the Emergency Stop Button (red button on the control) will stop all lift movement. At the same time an audible alert will sound for 10 sec. then pause for 5 sec. and then the sequence will repeat until the button is reset by turning it in the direction of the arrows on the button (clockwise). The Emergency Alert LED will also flash Red when the button is pressed and will remain flashing until the button is reset.
The Emergency Alert (audible and LED) can be activated by pressing any two buttons on the hand control at the same time (provided with the lift). This will stop all lift movement and activate the audible alert and the Red LED will flash. Once both buttons are released, the lift will return to normal operation and the emergency audible alert will silence.

For additional information on the LiftOperator controller, see LiftOperator manual 700-0500.

**Battery Pack** - The battery pack is located on top of the Control Box and is removable.

*To remove* - pull the battery pack away from the mounting plate so that the latch on the battery pack clears the side tabs on the mounting plate - then lift the battery pack up and away from the Control Box.

*To replace* - align the battery pack with the mounting plate so that the latch will drop over the center tab and that the bottom of the battery pack will fit in the recessed area on top of the Control Box. Lower the battery pack in place so that the latch is fully captured by the mounting plate and the battery pack drops fully seated onto the Control Box.

The battery must be completely removed from the lift and located away from the pool deck for charging.

The battery pack should be charged daily and cannot be overcharged. It is not necessary to fully discharge the battery prior to charging. Do not allow battery to fully discharge, as it will shorten battery life. It is not necessary to fully discharge the battery prior to charging. Do not drop the battery, as it could cause the unit to fail. If the battery case is cracked do not use and replace the battery. During temperature extremes beyond the range of 41 F (5 C) to 104 F (40 C) remove battery and place in a controlled environment or battery life may be shortened.

The battery pack has an LED indicator near the plug-in-port. It will glow Red when first plugged into the transformer. If the LED remains Red this indicates the battery pack needs charging. When fully charged, the LED will glow Green. If the battery is fully charged and is plugged into the transformer the LED will glow Red for approximately 10 secs, then glow
Green. If the LED flashes Red when plugged in this indicates a fault with the battery and indicates the battery pack should be replaced. All batteries are inspected prior to shipment. See warranty policy regarding battery replacement for problems after sale. Batteries have a normal lifespan of between 2-3 years, depending on use and care. A fully charged battery will provide approximately 30 to 40-lifting cycles, depending on the weight of the users. Prior to use the battery, charge level should be checked by observing the LED indicator above the charger plug to ensure sufficient charge level. The charger must be connected to the battery to view the LED.

**Battery Disposal** - The batteries located inside the battery pack are recyclable and shall be disposed of in accordance with applicable local, state/provincial or federal/national regulations.

**Locking Plate Assembly** - The battery pack can be secured to the mounting plate using the provided lock plate assembly. To install, open the lock plate so that the bottom tabs are moved close to one another to allow the lock plate to be inserted into the slots on the mounting plate secured to the lift. Close the lock plate assembly so that the tabs are captured by the slots. Insert a padlock (not provided) through the holes on the lock plate assembly to secure it.

**Hand Control** - The four button unit controls all lift movements. The arrows indicate direction of movement. Control is fully waterproof and meets IP67 standards.

**Seating System** - The seat is manufactured from rotomolded plastic with a stainless steel frame. Armrests are integrated into the seat and are designed for support when transferring onto the seat. They may be rotated up out of the way during transfer.

The seat belt must be used during each use. The footrest is removable and will float upwards to prevent damage if the seat is lowered too far. It is recommended that the seat be rinsed off with fresh water between each use and cleansed daily with a disinfectant solution of 1:100 dilution of household bleach to fresh water and then rinsed with fresh water. In the event of a contamination incident such as patient/user excreta - cleanse seat and seatbelt immediately with the above disinfectant solution. Do not use seat or seatbelt if it is damaged or becomes worn out.

This lift seat assembly is designed to be used exclusively with S.R. Smith aquatic access lifts.
UNPACKING & ASSEMBLY INSTRUCTIONS

REFER TO THE DIAGRAM (page 23) FOR PARTS IDENTIFICATION.

READ THESE INSTRUCTIONS IN THEIR ENTIRETY BEFORE BEGINNING INSTALLATION

Prior to opening the any packaging, carefully inspect the external condition of the shipping materials for any visible damage. It is important that any damage be noted on the Bill of Lading prior to signing for the delivery. Contact either S.R. Smith or your dealer immediately to notify us of any damage or missing parts.

Ensure mounting anchor has been installed in the correct location in the pool deck for proper lift operation. It is recommended that the anchor be installed by a person familiar with installing pool deck equipment.

The aXs2 Lift requires only simple assembly, using common tools for installation and setup. Position pallet close to deck anchor for easier assembly and set up.

</tbody>
</table>
Unpacking & Assembly Procedure for the aXs2:

1. Carefully remove lift components from packaging.
2. Remove seat assembly (#15) and frame (#14) and set aside for attachment.
3. Remove Deck Anchor securing bolt from Deck Anchor (#24), and set aside.
4. Remove Mast Assembly (#11) from packaging and place into deck anchor (#24), aligning the welded Tab on the Base with its slot to the hole in the Deck Anchor.

5. Remove and unwrap Hand Control (#6) from accessory carton.

6. Insert Hand Control (#6) plug into large connector on the Control Box (see image below) and temporarily hang Hand Control over flange on Mast. Make sure plug is keyed to keyway and is secure.

7. Attach the Battery Pack (#4) to the Control Box (#2) by sliding onto the top of the Mounting Plate and down onto the Control Box. To remove battery, pull slightly away from Mounting plate and lift Battery Pack off of the Control Box.
8. Rotate Lift so that Mast flanges (shown below) are positioned over the pool deck and not over the pool.

9. Locate the Actuator Arm Assembly (#12) and insert (2) Bushings (#21) into the holes in the end of the Actuator Arm closest to its flanges (see image).

10. Orient the Actuator Arm Assembly (#12), with Bushings installed, to the lower holes in Mast Flanges and using (1) Hex Head Bolt (#17), (2) Flat Washers (#16) and (1) Nyloc Nut (#22) as shown below, install the Arm. Tighten the Bolt and Nut using (2) 9/16” Box Wrenches.

11. Verify that Actuator (#1) is already attached to base of Mast, with (1) Hex Head Bolt (#23), (2) Washers (#16), and (1) Nyloc Nut (#22).
12. Attach the opposite end of the Actuator (#1) to the Actuator Arm Assembly (#12) using (1) Bolt (#23), (2) Washers (#16) and (1) Nut (#22) through the holes in the flanges of the Actuator Arm (see image below).

13. Attach the Support Arm Assembly (#13) to the upper holes in the Mast flanges by installing (2) Bushings (#21) into the holes in one end of the Support Arm, then insert the Arm with Bushings between the flanges of the Mast and align to the upper holes in the Mast flanges.

14. Using (1) Hex Head Bolt (#17), (2) Washers (#16) and (1) Nyloc Nut (#22), attach the Support Arm Assembly to the Mast flanges. Tighten Nut and Bolt using (2) 9/16” wrenches.
15. Attach the opposite ends of the Actuator Arm Assembly (#12) and Support Arm Assembly (#13) to Seat Bracket with (2) Bolts (#17), (4) Washers (#16) 4) Bushings (#21) and (2) Nuts (#22) in appropriate holes of the Seat Bracket (as shown below), following the same sequence as in previous step.

16. Locate Seat Assembly (#15) and attach to Seat Frame (#14) using (1) Screw (#28), (2) Washers (#29), and (1) Acorn Nut (#30). Tighten using (2) \( \frac{1}{2} \)" Box Wrenches.
17. Attach Footrest (#27) to Seat using (2) Screws and (2) Thumbnuts through holes on bottom of Seat and Footrest.

18. Verify that up and down controls operate properly - both Control Box touch pad and Hand Control.

19. Verify that side to side controls operate properly – both Control Box touch pad and Hand Control. (4 Button Control only).

20. Check red Emergency Stop button on Control Box for operation/activation of internal sounder.

21. Cover Control Box and battery with Console/Battery Cover to protect from moisture.

**USING THE aXs2 LIFT**

Obey all User Instructions listed in the Owner’s Manual whenever using lift. Obey all Caution, Warning, Operating Instruction(s) and Labels located on the lift whenever it is in use. It is the responsibility of the lift Owner to ensure that the correct safety procedures have been put in place and a risk assessment carried out. If a User is mentally challenged or has severe physical disabilities these issues must be taken into account to determine the number of persons required to complete the transfer onto the seat and the number of persons required to be in the water, ready to receive the User.

If the aXs2 will be used by a disabled person living on their own, a communication device should be installed in the area of use to call for assistance in the event of an emergency. Only persons healthy enough for water activities should use the aXs2. Users should consult with their physician to determine if water activities are appropriate for the User. Keep fingers and hands clear of lift arms during use.
TRANSFERRING

Once the unit is positioned for use, use the following procedure to transfer to the seat and into the water. Only persons healthy enough for water activities should use the aXs2. Users should consult with their physician to determine if water activities are appropriate for the User:

- Rotate the seat to either side of lift for best transfer position (3 o’clock or 9 o’clock).
- Raise or lower the seat to proper transfer height.
- Transfer onto the seat, ensuring that the user’s weight is centered on seat. Armrests can be rotated up if necessary. If user has a wheelchair, keep the wheelchair close by for easy retrieval.
- Fasten Seat Belt - thread loose end of belt strap through buckle - pull tight - to close - press latch down on belt material.
- Raise seat to allow enough leg room for rotation.
- Rotate seat to the 12 o’clock position, over the water.
- Lower the seat into the pool. The waterproof hand control can remain connected to seat if swimmer is operating lift.
- Unfasten Seat Belt - grasp latch and lift up, pull loose end from latch.
- When finished, return to the seat, ensuring user’s weight is centered on seat.
- Fasten Seat Belt.
- Raise seat to allow enough leg room for rotation.
- Rotate seat to original transfer position.
- Raise or lower seat to proper transfer height.
- Unfasten Seat Belt.
- Transfer off of the seat.
IN CASE OF HAND CONTROL FAILURE

**Lifting failure** - In the event of a lifting failure, there are control buttons built into the control box. Press the appropriate up or down/left or right button located on the front panel of the control box.

If the aXs2 will be used by a disabled person living on their own, a communication device should be installed in the area of use to call for assistance in the event of an emergency.

POOL DECK INSTALLATION FOR THE aXs2 ANCHOR

Ensure Locking Anchor has been installed in the correct location in the pool deck for proper lift operation. It is recommended that the anchor be installed by a person familiar with installing pool deck equipment.

The optimal mounting distance for the deck anchor is between 12”/30.5 cm to 20”/51cm from the edge of the pool. The aXs2 is designed to be used with simple pool edge designs without protruding gutters.

Please call S.R. Smith with any questions concerning deck anchor placement or if the aXs2 will work in your installation.

**Locking Deck Anchor**

(Install the anchor so the locking tab is either parallel to the Deck to Water (DW) edge or perpendicular and furthest away from the DW edge)

---

**Installing a Locking Anchor in a Concrete Deck**

The proper installation of the anchor depends on the construction and condition of the deck. If the deck meets the thickness and re-enforcing requirements shown in Appendix A then the anchor can be installed according to the instructions outlined in Appendix A.

If the existing deck does not meet the requirements outlined in Appendix A then the anchor can be installed per the instructions in Appendix B or you can consult an engineering professional.

The deck anchor reaction loads can be found in the Specification Section of this manual.

Once installed, you can lock the aXs2 lift into place by rotating the lift out of the way and removing the back housing of the base, using the provided hardware with a 9/16 socket wrench to tighten it into place.

Properly bond the anchor socket using the attached bonding screw per local codes.

**Turning failure** - If the lift will not turn electronically, remove the motor enclosure and verify that all connections are intact. If the connections are intact, replace the enclosure and remove the Motor Plug (with red stripe) at the Control Box. The lift may then be manually rotated by pushing or pulling on the seat.

If the aXs2 will be used by a disabled person living on their own, a communication device should be installed in the area of use to call for assistance in the event of an emergency.
STANDARD ACCESSORIES/OPTIONAL ACCESSORIES

The following items are included with all pool lift models:

- Seat Belt Assembly - Nylon water-resistant belt for added security.
- Battery/Charger – 24-volt rechargeable battery.

Optional accessories may be purchased for your aXs2 lift through your Authorized Reseller. The following accessories are available:

**Console/Battery Cover – P/N 910-1000:** Protects battery and control unit from exposure to moisture (blue)

**Total Cover - P/N AX9006:** Made of weather resistant nylon material to keep unit protected from elements when not in use.

**Anchor & Cap – P/N 300-6200L** - Lift Lock deck anchor measures 2.875”/ 7.30 cm OD, 2.75” / 6.98 cm ID. Includes cap and bonding screw.

**Seat Saver Cover – P/N 970-5000:** Made of weather resistant nylon to protect seat when not in use.

MAINTENANCE and CLEANING

Minimal maintenance will prolong the life of your lift. Keep all electronic components clean and dry. Excessive moisture collection can affect battery and lift performance and could lead to battery failure and/or the lift failing to operate. If the lift is used outdoors, an optional full cover is available and recommended.

Owners of lifts should be aware of any applicable local, state/provincial or federal/national regulations regarding the inspection and or testing of lifts.

The following schedule shall be performed to insure proper operation with the Daily items performed before each use:

<table>
<thead>
<tr>
<th>Maintenance Performed</th>
<th>Daily</th>
<th>Weekly</th>
<th>Monthly</th>
</tr>
</thead>
<tbody>
<tr>
<td>Check battery level before each use / Charge battery daily</td>
<td>✔</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Wipe Control Box and battery connection with a clean dry rag</td>
<td>✔</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Examine lift for any damage, lose or missing hardware</td>
<td>✔</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Test for normal operation</td>
<td>✔</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Spray gear assembly with a heavy-duty rust inhibitor/lubricant such as LPS 3 - Heavy-Duty Inhibitor</td>
<td></td>
<td>✔</td>
<td></td>
</tr>
<tr>
<td>Make sure all cable connections are properly secured</td>
<td></td>
<td>✔</td>
<td></td>

</tbody>
</table>

**Cleansing Performed – after each use**

<table>
<thead>
<tr>
<th>Cleansing Performed</th>
<th>Daily</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rinse seat and seatbelt with fresh water between each use - Cleanse seat and seatbelt with a disinfectant solution of 1:100 dilution of household bleach to fresh water and then rinse with fresh water and dry entire lift daily. In the event of a contamination incident such patient/user excreta - cleanse seat and seatbelt immediately with the disinfectant solution*</td>
<td>✔</td>
</tr>
<tr>
<td>Cleanse all battery connections with a nylon scouring pad</td>
<td>✔</td>
</tr>
<tr>
<td>Cleanse all metallic surfaces with a cleaner wax to maintain the finish of the lift</td>
<td>✔</td>
</tr>
</tbody>
</table>

* When using the disinfection solution, avoid direct contact with the skin and eyes. In the event of a contamination incident - immerse the seat belt in the disinfection solution for 10 min. and then rinse thoroughly with fresh water.
TROUBLE SHOOTING

Be sure the battery is fully charged before troubleshooting.

Lift does not rotate

_Do lift raise or lower?

Yes.
1. Check connection to Control Box. Be sure plug is pushed in all the way.
2. Check hand control connection to Control Box for damaged pins.
3. Check connections on terminal block located on frame for loose wires.
4. Check connection cable for damage.
5. Try operating the lift using the control buttons on the front panel of the controller. If the lift rotates when using the buttons on the control box, the hand control is likely the problem.
6. If the lift does not rotate when using the buttons on the control box, reverse the motor cables as follows: Locate the area on the Control Box where the cables are attached. Swap the actuator cable from connector #2 with the 24v motor cable from connector #1. Activate the up and down buttons on the hand control. If lift rotates, the problem is likely the hand control. If lift does not rotate, the problem is likely the 24v motor.
7. Contact your Authorized Reseller or S.R. Smith for replacement information.

_Do lift raise or lower?

No.
1. Check battery charge level.
2. Check battery connection.
3. Use another fully charged battery. If lift continues to not function, replace the Control Box.

Lift does not Raise or Lower

_Do lift rotate?

Yes.
1. Check connection to Control Box. Be sure plug is pushed in all the way.
2. Check hand control connection to Control Box for damaged pins.
3. Check connection cable for damage.
4. Activate the up and down buttons on the front panel of the control box. If lift raises and lowers, the problem is likely the hand control.
5. If the lift does not raise and lower when using the buttons on the control box, reverse the cables as follows: Locate the area on the Control Box where the cables are attached. Swap the actuator cable from the connector #2 and the 24v motor cable from connector #1. Activate the left and right buttons on the hand control. If the lift raises and lowers, the problem is likely the hand control. If the lift does not raise and lower, the problem is likely the Actuator.
6. Contact your Authorized Reseller or S.R. Smith for component replacement information.

_Do lift rotate?

No.
1. Check battery charge level.
2. Check battery connection.
3. Use another fully charged battery. If lift does not function, replace the Control Box.
LONG-TERM STORAGE

When storing the lift for an extended period of time:

- Wash seat with disinfectant solution and then rinse with fresh water and dry entire lift
- Spray gear assembly with a heavy-duty rust inhibitor and lubricant such as LPS 3 - Heavy-Duty Inhibitor
- Keep the battery on the charger in a dry temperature controlled area
- Cover unit and store in a dry location away from pool chemicals

Questions/Comments - Contact us at 800.824.4387 or 503-266-2231 or info@srsmith.com. For information regarding Authorized Resellers worldwide visit www.srsmith.com

PRODUCT REGISTRATION & WARRANTY INFORMATION

Register your lift at srsmith.com. Product registration ensures you receive timely information about product updates and in the event of a warranty issue, helps us process claims more efficiently.

The S.R. Smith warranty becomes effective on the date of manufacture.

To initiate a warranty replacement, please follow the process outlined below.

1. Take photos of the damaged product.
   a) The photo must include the entire unit
   b) Also include one photo or more of the damaged area.
2. Write down or take a photo of the serial # sticker from the product.
   S.R. Smith provides a serial # for every pool lift we produce. The sticker with the serial number can be found at the bottom of the mast near the base.
3. Attach the photos and the serial # to a written request for replacement under the S.R. Smith warranty. Please include the following information:
   a) Product name and description.
   b) Date of purchase and/or date of installation.
   c) Description of damage.
   d) Shipping address with a contact name and phone number.
4. Send photos, serial # sticker and your written request by email or mail to warranty@srsmith.com or:
   S.R. Smith, LLC
   PO Box 400
   1017 SW Berg Pkwy
   Canby, OR 97013
   Attn: Warranty Specialist

**NOTE: Missing information will result in a processing delay and possibly denial of your claim.

Should you have any questions regarding this process, please contact S.R. Smith's Warranty specialist at 800.824.4387 or 503.266.2231 or email warranty@srsmith.com

APPENDIX A

GENERAL NOTES:
1. NORMAL WEIGHT OF CONCRETE = 150 lbs/ft³.
2. CONCRETE MINIMUM COMPRESSIVE STRENGTH AT 28 DAYS TO BE fc = 2500 psi.
3. REINFORCING BARS SHALL CONFORM TO ASTM A615, GRADE 60, DEFORMED.
4. PRECISION NON-SHRINK CEMENT GROUT SHALL HAVE A MINIMUM COMPRESSIVE STRENGTH OF 5000 psi at 28 days. SUBMIT PRODUCT SPECIFICATIONS FOR APPROVAL.
5. EPOXY BONDING AGENT TO BE FLEXBOND 540 OR APPROVED EQUAL.
6. MAXIMUM LOAD = 340 lbs AT 52 INCHES.
7. ASSUMED SOIL BEARING CAPACITY OF 1200 psi.

CONCRETE PLAN
SCALE: 1" = 1'-0"

NOTE: VERIFY REBAR & SLAB THICKNESS AFTER CORING. DO NOT INSTALL IF SLAB IS LESS THAN 4" THICK.
